

Invest in Your Home... *It will Pay Dividends*

Millerman and Sons has developed our Green Home Assessment focusing on the major areas in your home that can produce sustainable home savings.

Going green is more than just changing some lightbulbs. Let us show you the simple things you can do to save money and make your home the most comfortable place to be.

We conduct a green inspection of your home and work with you to review your energy consumption, use of technology, water use, and lawn care.

Take your assessment to the next level and have MillerMan build a custom Green Home Plan for you. Plans are personalized to meet your sustainability goals in a timeframe set by you.

MillerMan has a network of contractors to deliver the different elements of your plan and can partner with you to manage your projects throughout the process.

Green Your Home With a Company You Trust

***Becoming a little green now can
save you a lot of green later!***

Sustainable Home Savings

As homeowners, there is no more important time to invest in your greatest asset, your home. Today even small changes in the operational efficiency of your residence can improve your monthly budget. Which translates to more money in our pockets.

As Florida residents, we have seen the worst of America's economic downturn. What makes this particularly difficult for homeowners is rapidly rising costs for our most precious resources namely fuel and water.
